StockeX

Available now

Stock you can trust.
Scanned from dock to dispatch.

A warehouse management system for the floor. Every receipt, move, pick and count is confirmed by a scan and posted to one stock ledger.

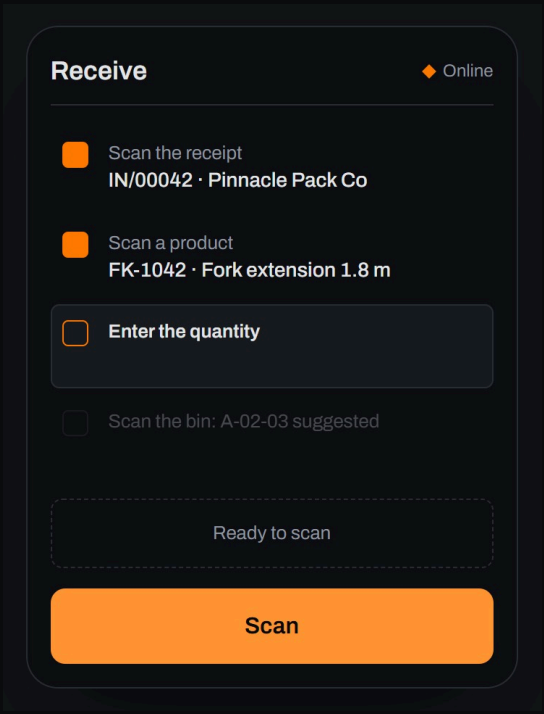

www.exlynks.com/software/stockex

info@exlynks.com

The floor, one scan at a time

Each task gets its own screen, big buttons and a scan field that is always ready. Nothing changes until a scan confirms it.

1	Receive	Lots and expiry dates captured at the dock.
2	Put away	To a suggested bin, confirmed by scanning it.
3	Pick	In walking order, singly or in batches with totes.
4	Pack	Scan every item, choose the carton, print the label.
5	Ship	Each shipment posted to the stock ledger.
6	Count	Blind cycle counts, bin by bin.

Handheld preview with sample data.

Any handheld

Phones or rugged Android handhelds, with a hardware scanner or the camera.

Nothing to install

Runs in a modern browser. No app store needed.

Short reasons kept

Short or damaged picks keep their reason.

Keeps working when the Wi-Fi drops

Work done in a dead zone stays on the device and posts once the connection returns. Exactly once.

Stock that adds up

Six things Stockex does on every shift.

One ledger for every unit

Stock only changes through posted moves. Every quantity has a history.

- No negative stock
- Lots, serial numbers and expiry dates
- First-in or first-expiry first-out picking

Scan-first on the floor

A full-screen handheld app built for gloves and glare.

- Put away to a suggested bin
- Pick singly or in batches with totes
- Pack by scanning every item

Works without network

Work done in a dead zone posts when the connection returns.

- Each action posts exactly once
- Queued work replays only for its owner
- Refused actions stay visible, with the reason

Counts that hold up

Blind cycle counts, with a second look before stock changes.

- Counters don’t see the expected quantity
- Large differences ask for a recount
- Supervisors approve before anything posts

The right access for each role

Permissions enforced by the server, not just hidden in the menu.

- Roles from administrator to auditor
- Handheld sign-in with a personal PIN
- An audit trail of who changed what

Connects to what you run

A documented REST API and signed webhooks.

- Scoped API keys for ERP and e-commerce
- Signed webhooks with automatic retries
- Purchase-order imports, never posted twice

In the office

Stock, bins and reorder points on one screen, with the action next to the problem.

Inventory · Warehouse A — All 8 | Below reorder 3

SKU	Item	Bin	On hand	Reorder at	
PL-0310	Euro pallet 1200 × 800	B-01-01	316	120	OK
FK-1042	Fork extension 1.8 m	A-02-03	24	10	OK
BT-2201	Traction battery 48 V	C-04-02	3	4	Raise PO
TY-0815	Solid tyre 18 × 7-8	A-05-01	12	8	OK
HS-0402	Hydraulic hose kit	C-02-04	2	6	Raise PO
ST-7710	Stretch film 500 mm	B-03-02	88	40	OK

Desktop preview with sample data.

Also in Stockex

- Returns with inspection
- Quality holds and quarantine
- Kitting and multi-level BOMs
- Cross-docking
- Replenishment and reorder points
- Slotting by location and capacity
- Labour standards from real tasks
- 3PL billing from captured activity
- Point of sale for trade counters
- Carrier rate cards and labels

How it runs

Devices
Any phone or rugged handheld with a modern browser.

Hosting
Hosted by Exlynks, or on your own server.

Backups
Nightly, proved by a weekly practice restore.

Sign-in
Password in the office. Company code and PIN on handhelds.
